Monthly notices of the Royal Astronomical Society Volume 49

By Royal Astronomical Society

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 126 pages. Dimensions: 9.7in. x 7.4in. x 0.3in.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1889 Excerpt: . . . in comets at aphelion and planetary nebulae, the spectra are identical, consisting simply of magnesium radiation (X 500). With the first increase of temperature continuous spectrum is added in both cases. As the nebulous swarm condenses, an apparent star, with a spectrum consisting of bright flu tings and lines, is the result, and this is also the case in cometary swarms. Still further condensation of the nebulous swarm results in a body of Group II. giving mixed carbon radiation and metallic fluting absorption; and this, also, is a well-marked stage in the development of cometary spectra. Further condensation in both cases results in line absorption. Schiaparellis view, therefore, that comets consist of nebulous materials drawn into the solar system by solar attraction, is now abundantly demonstrated by the spectroscopic study of nebulae and comets. The discussion of cometary spectra, therefore, strengthens the general hypothesis, which would...

Reviews

It is easy in read through easier to fully grasp. it had been writtern very completely and useful. I am pleased to let you know that here is the greatest book we have read during my personal life and could be he very best book for possibly.

-- ***Miss Marge Jerde***

It is really an remarkable publication i actually have possibly study. It usually is not going to cost excessive. Its been written in an exceedingly basic way and is particularly only right after i finished reading this publication through which basically transformed me, affect the way i think.

-- ***Dr. Breana O'Kon***
