RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 774 pages. Dimensions: 9.7in. x 7.4in. x 1.5in.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1875 Excerpt: . . . the world. But this percentage of verifications, we have reason to believe, is sensibly greater when the predictions are based not merely upon empirical rules, but equally upon a consideration of such general principles as must form the groundwork of the true deductive science. The foundations of the new meteorology are necessarily found in the simple laws of mechanics. They have been considered by several authors, but by none with so much completeness as in the work of Ferrel Vol. xi. --29 On the Motions of Fluids and Solids, relative to the Earths Surface (Nashville, 1854, and New York, 1860). In this treatise the motions and figure of the atmosphere are first treated of, on the hypothesis that no resistance is offered by obstacles or by friction upon the earths surface; in a subsequent section the influence of such resistance is considered, on the hypothesis that a uniform coefficient of friction obtains over the whole earths surface. Mr. Ferrel thus deduces the necessary existence of two belts of high barometric pressure, extending entirely around the globe between the tropics and the parallels of 30 N. and S. respectively, and of a belt of low pressure at the equator, as well as regions of low barometer within the arctic and antarctic circles; belts of calms near the equator, the tropics, and the polar circles are also deduced. The continents and oceans offer very unequal frictional resistances, which causes the equatorial belt of calms to lie on the...
